QUALITY FOR LIFE

Your expert for customized care!

Innovation for Mobility – Otto Bock HealthCare GmbH

Demand first class!

Otto Bock HealthCare is the global market leader in orthopedic technology and stands for more than 80 years of innovation and success. We invite you to benefit from our competence that has served so many people from all continents around the globe. Otto Bock will not settle for less than the best possible solution for you! After all, why should your mobility and zest for life suffer any compromises? You are entitled to the best possible fitting. And fulfilling that mission is what Otto Bock is all about. Progress is a tradition for us. Otto Bock was the first to develop modular lower limb prosthetic systems nearly forty years ago and nowadays

it represents the global standard in the prosthetic industry. Today we are pioneers with our micro-processor-controlled elbow and knee joints. And of course, our R&D engineers are continuously working to develop and launch future solutions. Our strong points lie in high-end products, including their optimal application during fitting. Therefore, if you are seeking the greatest possible mobility with technically mature prosthetic and orthotic novelties, Otto Bock is the right partner for you. True to our motto „**Quality for Life**“, we are committed to offering you maximum independence and mobility.

Quality “Made in Germany”

Our orthopedic competence combines the know-how of globally operating specialists from various fields with the “**Made in Germany**” quality fabrication.

To ensure that users benefit from the full potential of their new device, Otto Bock also places high demands on orthopedic fitting practice. In cooperation with universities, technical colleges, physicians and therapists, we have developed specific fitting programs.

These fitting concepts have been successfully applied in Duderstadt for many years. The result: Optimal fittings that optimize your range of movement and safety in daily life.

Guests from all over the world

Our fitting practice stands out by its experience and know-how. At our headquarters in Duderstadt, we host guests and fit patients from all over the world. We offer modern, complete solutions. Even the most complex and challenging special fittings are carried out successfully by our certified specialized professionals. Our motivated team is looking forward to your visit.

Please feel welcome to visit our headquarters, where you can:

- Collect detailed and competent information on customized fitting solutions in a pleasant atmosphere.
- Test different components. Our broad range of products and their immediate availability allow to determine an optimal combination in almost no time. We also custom-build devices including special designs to suit your individual needs.
- Have your prosthesis or orthosis manufactured

and fitted by experienced experts using future technologies. The balance between function, aesthetics and comfort makes for a natural appearance and the distinguishing mark of our high-end fittings.

- Benefit from our broad range of products as a system provider. As a user of an orthotic or prosthetic device, you may also be interested in a top quality wheelchair for relaxation purposes or in special shoes suitable for use with your orthosis.
- To provide best possible fitting solutions, Otto Bock collaborates with local clinics, rehabilitation centers, physicians and therapists. As such, we offer on-site rehabilitation programs such as gait training to help users adjust to the daily use of their prosthesis or orthosis. We also have a gait lab where we can analyse the gait pattern individually.

Our broad service range – customized solutions for you

Prosthetics lower extremities

In prosthetics we carry out all required prosthetic fittings following:

- forefoot amputations
- hindfoot amputations
- below-knee amputations
- knee disarticulations
- above-knee amputations
- hip disarticulations
- hemipelvectomies

Amongst others, we are experts for modern components and technologies such as the C-Leg® or Harmony® System.

Prosthetics upper extremities

We provide prosthetic fittings following:

- finger amputations
- partial hand amputations
- transcarpal amputations
- forearm amputations
- elbow disarticulations
- above-elbow amputations
- shoulder disarticulations

Of course we provide all three types of arm prostheses: The purely cosmetic, the cable controlled and the myoelectrical arm prostheses.

We offer customized solutions, including future myoelectrical fittings such as the DynamicArm or the SensorHand Speed.

Gait Training Room

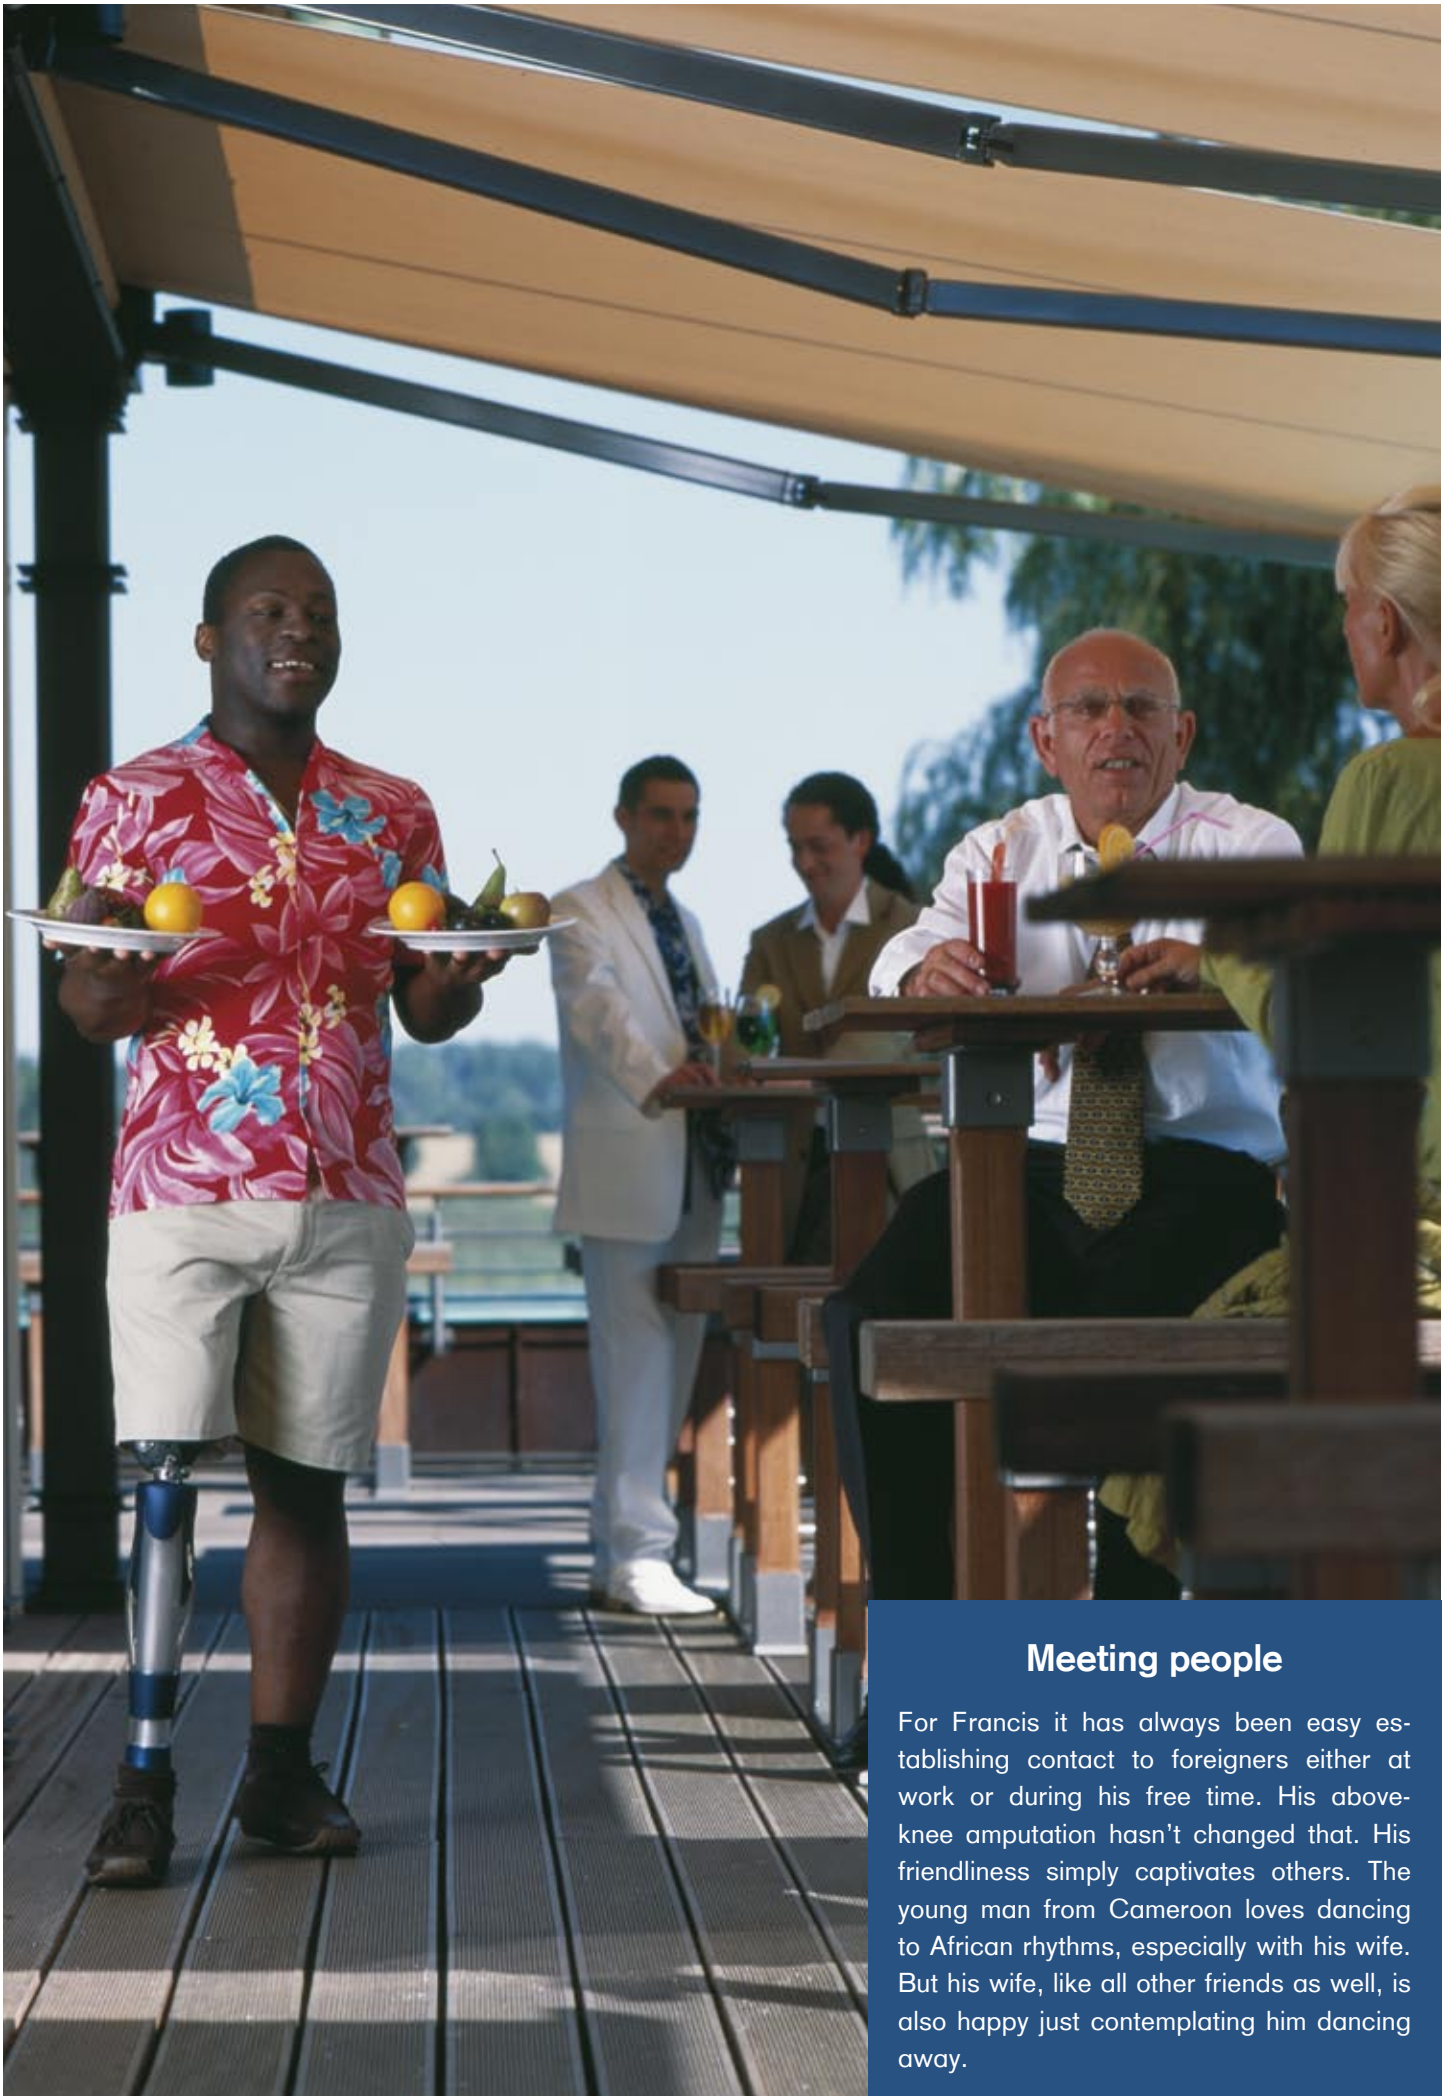

Gait Check

Fun at work

Because of a serious accident nine years ago, Jan lost both his legs and his left arm. Today he is a successful free lance web designer, nearly drowning in work. So it's not unusual that he has fourteen hour work days. But that doesn't bother him at all since he loves what he does. To relax, he enjoys playing ping pong with friends. And if work allows it, he loves going on holiday with his girlfriend, his favourite destination being Italy.

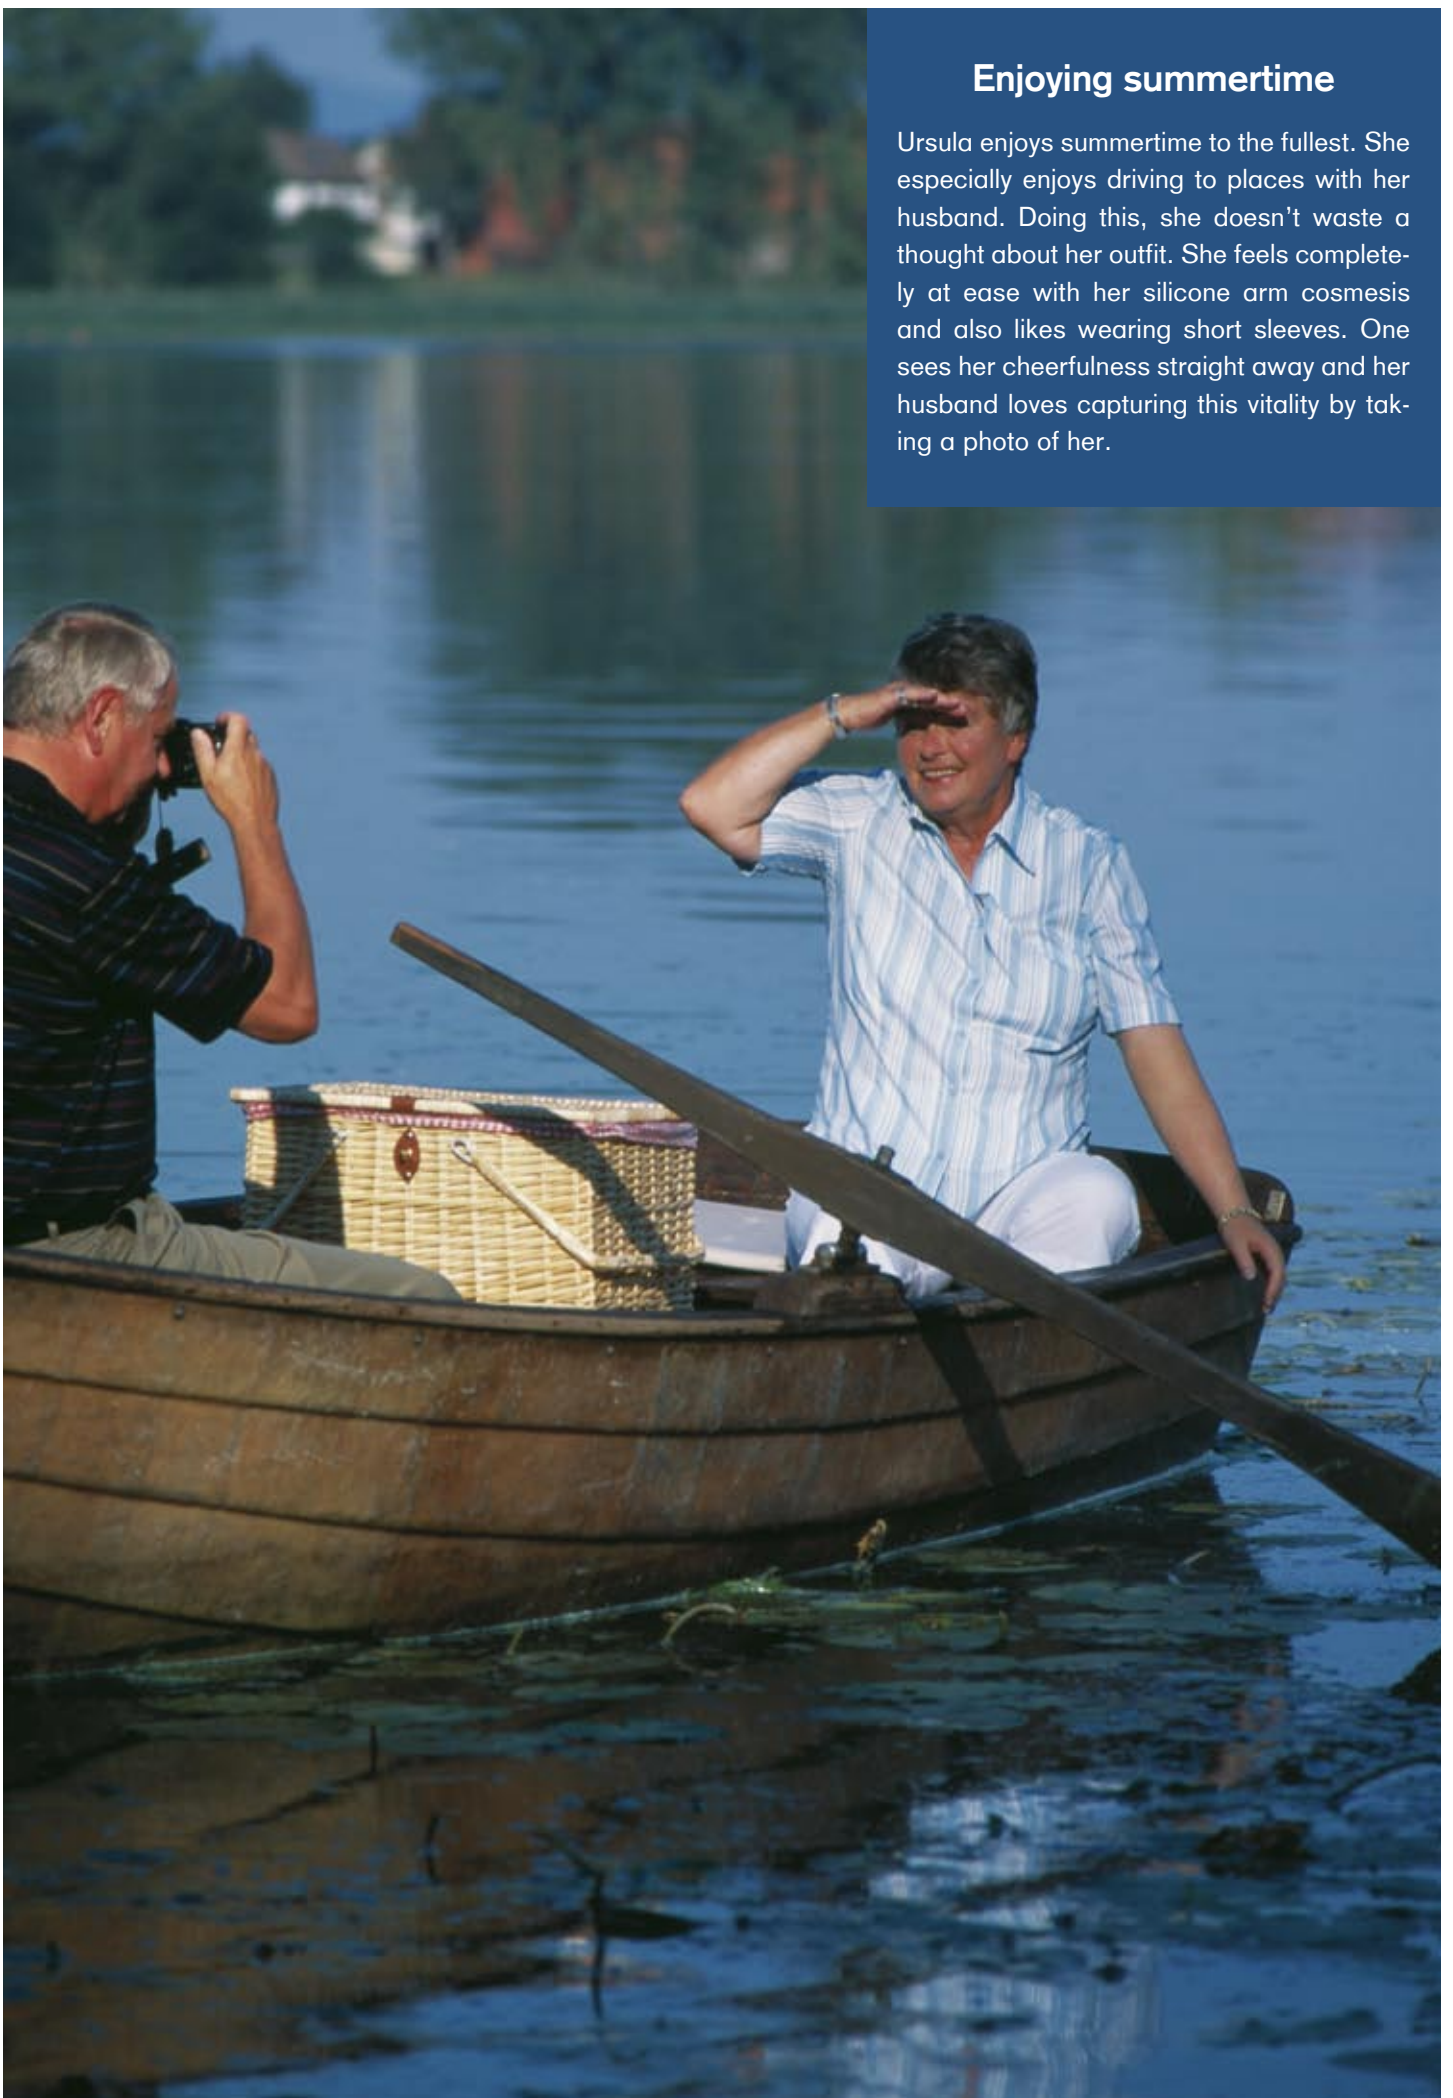

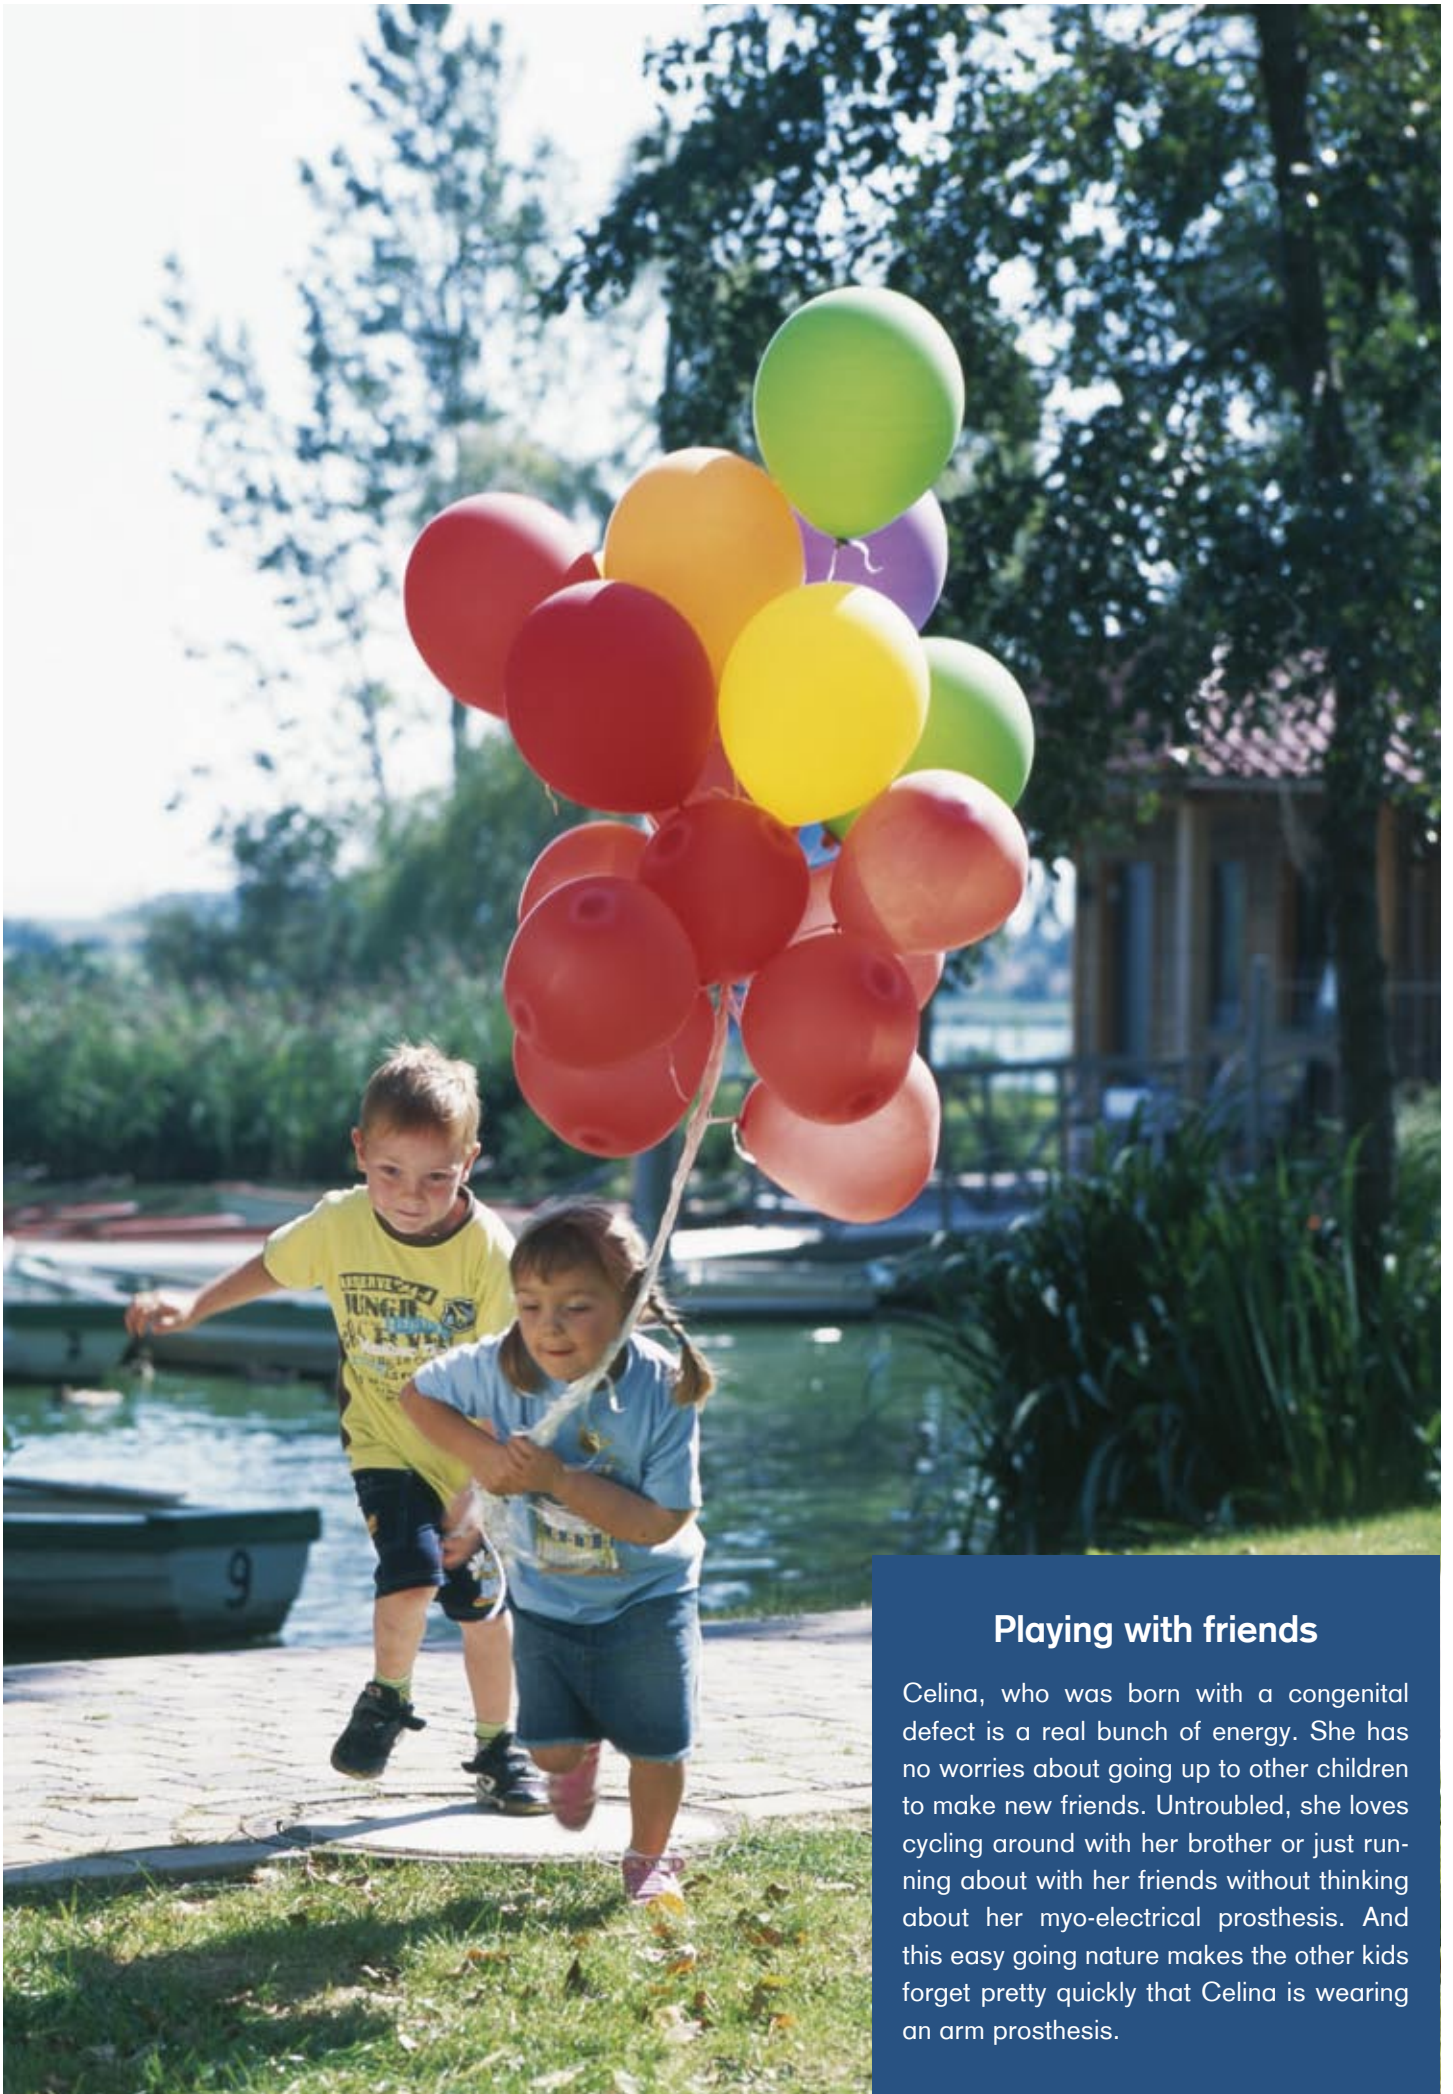

Meeting people

For Francis it has always been easy establishing contact to foreigners either at work or during his free time. His above-knee amputation hasn't changed that. His friendliness simply captivates others. The young man from Cameroon loves dancing to African rhythms, especially with his wife. But his wife, like all other friends as well, is also happy just contemplating him dancing away.

Enjoying summertime

Ursula enjoys summertime to the fullest. She especially enjoys driving to places with her husband. Doing this, she doesn't waste a thought about her outfit. She feels completely at ease with her silicone arm cosmesis and also likes wearing short sleeves. One sees her cheerfulness straight away and her husband loves capturing this vitality by taking a photo of her.

Playing with friends

Celina, who was born with a congenital defect is a real bunch of energy. She has no worries about going up to other children to make new friends. Untroubled, she loves cycling around with her brother or just running about with her friends without thinking about her myo-electrical prosthesis. And this easy going nature makes the other kids forget pretty quickly that Celina is wearing an arm prosthesis.

Orthotics

Our Orthotics department manufactures limb support devices. For lower extremities, we offer:

- KAFO's: Knee- Ankle- Foot Orthoses
- knee orthoses
- complete leg orthoses
- reciprocal gait orthoses

Modern components and technologies can be used such as the EMAG Knee Joint and Prepreg carbon technology. Of course, we also offer orthoses for upper extremities.

Silicone

We use silicone to manufacture customized devices. Silicone assures perfection in each and every detail and allows to match your anatomical shape and skin color. We offer:

- finger, finger phalanx and partial hand prostheses
- toe and forefoot prostheses
- liners for arms and legs
- orthotic devices
- cosmetic covers
- scar compression products

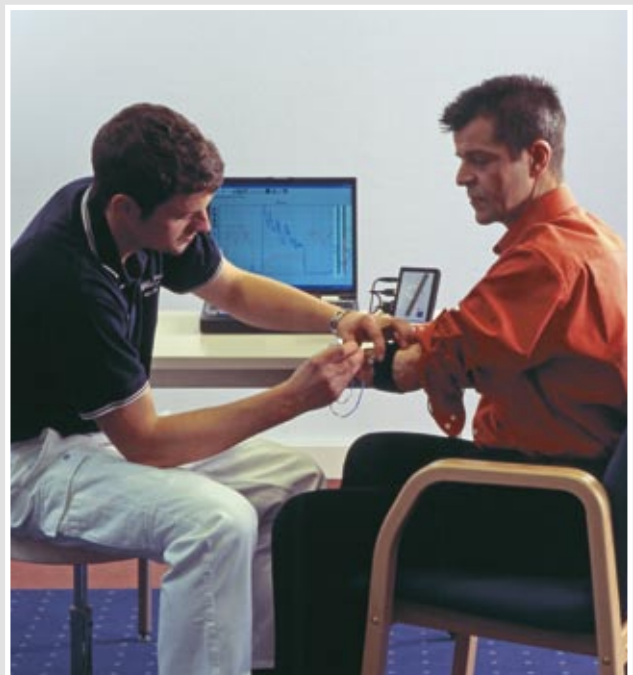

Comfort and Aesthetics

We know functionality is not everything. That's why we also give high priority to the comfort and the cosmetic aspect of your individual prosthesis or orthosis. We realize the critical importance of a socket with a best possible shape and fit. Through our strength in Socket Technologies we also aim at maximum comfort concerning the interface between your body and your orthopedic device. Regarding aesthetics we consider on one hand the appearance of your device. On the other hand aesthetics also means coming closest possible to natural gait patterns and body movements. All of these aspects will be considered during your treatment with our professionals.

Alignment Control

Myoelectrical Fitting

Visit us!

The Otto Bock headquarters in Duderstadt are conveniently located in the center of Germany. Surrounded by a scenic landscape, we are also a half hour's drive from Göttingen, a renowned university town with flair. Hence, visitors and the persons accompanying them can expect an enjoyable outing when visiting Otto Bock.

Duderstadt is a charming medieval town. The town's landmark is the "Westerturm": a tower with a swivelled peak. It was once built to serve as the town gate. Together with the look outs along the old city walls it belongs to the medieval fortifying system of the city. The town hall is the oldest and most beautiful building of its kind in Germany and

completes the town's historic landscape. On the outskirts of Duderstadt, along the old city walls you will find lovely parks and gardens. These will give you a taste of more to come. Indeed the whole regional surrounding is inviting for walks and field trips with its lakes, castles and the nature foundation from Professor Heinz Sielmann.

Though Duderstadt has a population of 25,000, it receives several thousand Otto Bock guests each year. The town's residents are open-minded and appreciate the many visitors coming from all over the world. Otto Bock's motto Quality for Life is thus quite at home in this small town in the centre of Germany.

Always at your service

From the very first contact, to the fitting and beyond, during follow-up, our customers enjoy personalized and individualized service. We take care of you and the people accompanying you. Thanks to our international presence and experience we are at ease with the different cultural needs of our guests and can adapt to your specific wishes.

Our broad service concept includes:

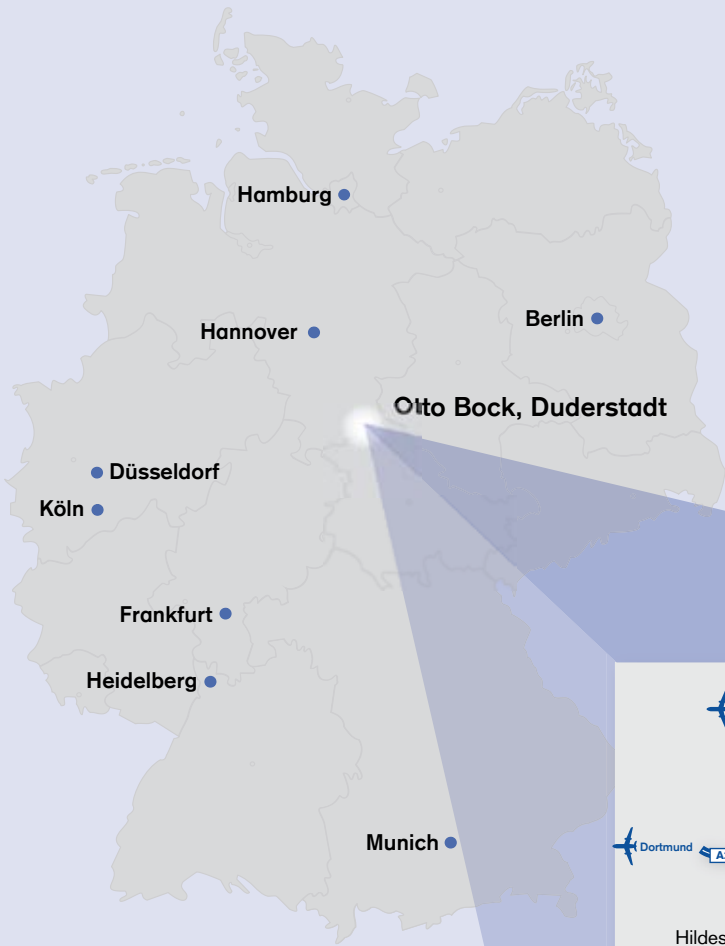

- visa and travel advice
- daily shuttles between your accommodation and our company according to your individual schedule
- selection and reservation of accommodation according to your wishes
- organizing the transport from the airport or train station to Duderstadt
- organizing interpreter services if necessary
- organizing a recreational program for you and the people accompanying you

An inherent part of our service concept is the cooperation with physicians and therapists. We see this multidisciplinary approach as a fundamental success factor for your treatment. According to your individual requirements we will organize the necessary appointments with our network of partners.

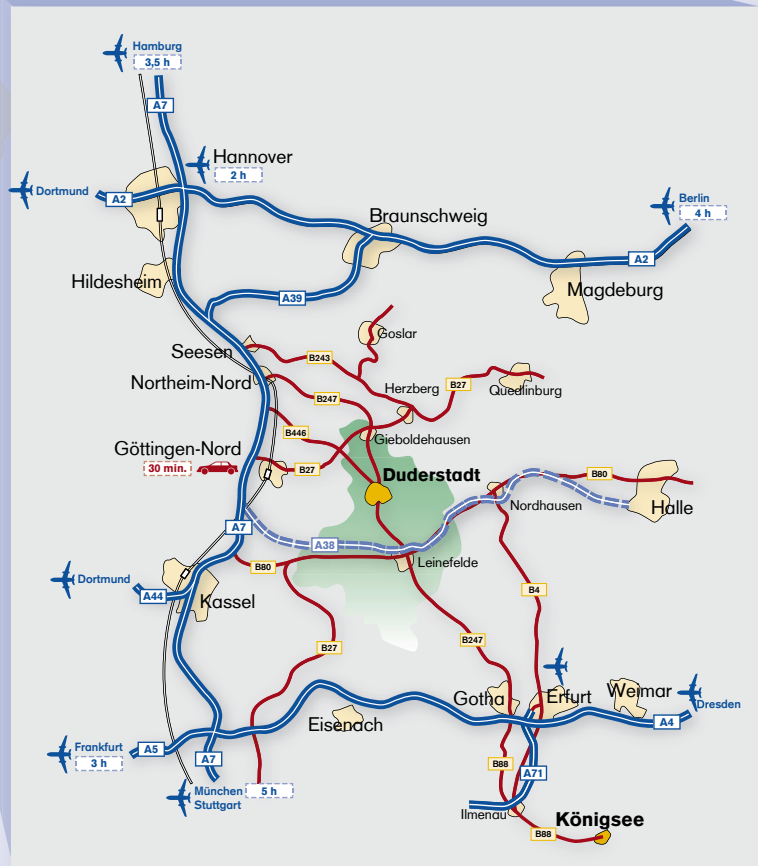

Seeing is believing! Otto Bock will gladly tailor a service package for your specific needs. Clearly, a first-class fitting offer needs more than just technology and know-how. After all, quality of life is much more than just a fitting.
